

OVERVIEW

DFuze Net brings the power of DFuze Explosives Intelligence Management to more desktops by providing secure web based connections to your central DFuze database.

DFuze Net is a web browser based application that allows users to add, view, update and attach the important data that is necessary to the immediate data collection and retrieval needs of the anti-terrorism community. Data, images, video and documents are added, viewed or edited from any intranet, internet or network enabled PC.

FEATURES

DFuze Net has been developed as a result of close consultation with terrorism experts across the globe and includes a large number of features that will enhance workflow, productivity, sharing and mobility of data and will help operatives gain greater insights into the growing problems posed by terrorism at local and global levels. DFuze Net features include:

COLLECT, STORE, EDIT & SHARE

DFuze Net allows unlimited, realtime data input and sharing, from remote or office.

The application is a proven framework for creating media rich data records relating to terrorist activities. Newly created records are instantly saved on the Enterprise server and can be accessed and edited by other DFuze Net or Enterprise users. The pre-defined databases help operatives organise their intelligence include Main Incident, Groups, Persons Involved, Bomb Vehicle, Bomb Letter/Parcel, Bomb Pipe, Detonators, Explosives, Ordnance, Power Source, Initiation System, Components, CBRN, Firearms, Investigative Assistance, Render Safe Procedure, Media, Press Clippings and Press Clippings Media. Authorized Users have access to all available content that has been cleared for sharing

MEDIA RICH

Commonly used media files such as mpg, wav, jpg and gif are fully supported by DFuze Net and are viewed within the application using the application's own media player and image viewer. All other regularly used files such as word processing and spreadsheet files are viewed using 3rd party application that may be installed on the computer.

RETRIEVE

The system boasts two powerful search tools that give rapid access to data and media. Quick Search will search across all databases for a search term and the more advanced Super Search will retrieve hits from selected fields using multiple criteria.

BUILD INTELLIGENCE

Records are easily linked together to help build a picture of an incident or terrorist organisation. For example, images of detonator fragments recovered from an incident can be linked to a terrorist group and explosives records for easy retrieval and viewing at a later date.

TRANSLATIONS

DFuze Net supports a wide range of languages and the database and field labels are translated with just a few clicks.

SECURITY

DFuze Net offers the same high security standards as DFuze Enterprise Edition. DFuze Net utilizes SSL encryption, providing a secure communication between your web browser and the DFuze backend. Industry standard 128bit encryption ensures all data being sent to and from DFuze Net is encrypted and secure.

ADJUSTABLE IMAGE QUALITY

DFuze Net operatives can select low, medium or high image quality to suit to the bandwidth available.

QUALITY CONTROL AND DISSEMINATION TOOLS

Each record details a compliance checking tool which allows users with the appropriate rights to mark a record as compliant. All records can be marked by users with the Forward Locking tools as Clear, Do Not Print, Do Not Forward, or Do Not Print or Forward.

REFERENCE LIBRARY

A media rich library to store all common open source pictures and data.

INTEGRATION WITH DFUZE ENTERPRISE EDITION

DFuze Net settings are administered by the parent DFuze Enterprise software.

Settings include:

- User Create/Delete & Passwords
- Access rights including read, write, edit, compliance and print.
- Audit reports detailing user logins, record access and printing.
- Translations for database names, field labels and buttons.
- Pick list values.

BENEFITS

NO INSTALLATION - LOW START UP COST

DFuze Net operates within Microsoft's Internet Explorer 6.0 Web Browser and keeps installation and maintenance processes to a minimum.

NO INSTALLATION SECURE MOBILITY

The application can run on any PC which has access to the Enterprise Dfuze Server and thus if the internet is the chosen form of connection then the Dfuze Net operator can access the SSL secured data via any internet ready computer. Operational benefits of this mobility include hot desk-ing and the ability to grant access to external organisations.

HIGH PRODUCTIVITY

Realize efficient and productive work with intelligence collation, reporting and dissemination, powerful imaging, media playback and document management facilities all just a few clicks away.

RAPID INTELLIGENCE RETRIEVAL

A combination of SQL Server technology and optimized networking ensures un-paralleled data retrieval.

GREATER INSIGHTS

Through advanced techniques DFuze Net will help your intelligence team gain greater insights into complex situations.

IMPROVED SHARING

Easily and securely share intelligence between departments and with other national or international agencies.
